to me, Rodger, Patrick

Tim,

Hourly met data for the new tower from 2008 to most recent would be great. We appear to have the ambient PM data through 2008 so can we please have the PM data from 2009 to most recent. Both in Excel format if possible please.

The other outstanding modeling-related data need would be a map of the facility buildings showing an initial estimate of the location (+/-100 feet) of the Parachute boiler stack. This should take care of the ambient/modeling related items for now.

I'll send a separate e-mail which outlines the project definition items that we'll need based on our Wed. discussion. Thanks much.

-Tim
